

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please ADD new claim 10 in accordance with the following:

1. (previously presented) An E-mail system, comprising:
 - a receiving device receiving transmission information transmitted from a sender to a plurality of receivers;
 - a storing device storing, independent of receiving the transmission information, keyword information predetermined for respective receivers, wherein the keyword information is designated by the sender and different for respective receivers;
 - an emphasizing device emphasizing and highlighting different parts of the transmission information for respective receivers, the different parts including respective keyword information for respective receivers stored by the storing device, and preparing E-mail information including all of the transmission information with the transmission information in which the different parts are highlighted for respective receivers; and
 - a transmitting device transmitting the E-mail information including all of the transmission information to all respective receivers.
2. (original) The E-mail system according to claim 1, wherein the receiving device receives a part of the transmission information that the sender designates and information about a corresponding transmission destination, and the emphasizing device emphasizes and highlights the designated part and prepares E-mail information for a receiver corresponding to the transmission destination.
3. (cancelled)
4. (previously presented) A terminal apparatus, comprising:
 - a transmitting device transmitting transmission information prepared for a plurality of receivers including all of the transmission information, and keyword information, independent of

the transmission information, predetermined for respective receivers, wherein the keyword information is designated by a sender and different for respective receivers; and

an indication device indicating E-mail information that emphasizes and highlights different parts of the transmission information for respective receivers, the different parts including respective keyword information for respective receivers, with all of the transmission information sent to all respective receivers.

5. (previously presented) A computer-readable recording medium recording a program causing a computer to perform:

receiving transmission information from a sender to a plurality of receivers;
emphasizing and highlighting the different parts of transmission information for respective receivers with information independent of the transmission information;
preparing E-mail information for respective receivers; and
transmitting the E-mail information including all of the transmission information to all respective receivers.

6. (previously presented) An E-mail transmitting method, comprising:
preparing transmission information to be transmitted from a sender to a plurality of receivers;

emphasizing the transmission information for respective receivers with information independent of the transmission information;
preparing E-mail information for respective receivers;
transmitting the E-mail information including all of the transmission information to all respective receivers; and
emphasizing and displaying the transmission information for respective receivers.

7. (previously presented) An E-mail system, comprising:
receiving means for receiving transmission information transmitted from a sender to a plurality of receivers;

emphasizing means for emphasizing the transmission information for respective receivers with information independent of the transmission information, and preparing E-mail information for respective receivers; and

transmitting means for transmitting the E-mail information including all of the transmission information to all respective receivers.

8. (previously presented) A system for propagating a signal from a propagating computer to receiver computers, said propagating computer of said system comprising a program, said program causing the computer to perform:

receiving transmission information transmitted from a sender for a plurality of the receiver computers;

emphasizing and highlighting the different parts of transmission information for respective receiver computers with information independent of the transmission information and preparing E-mail information for respective receiver computers; and

transmitting the E-mail information including all of the transmission information to all respective receiver computers.

9. (previously presented) A method, comprising:

receiving information for different destinations with the information having different parts;

emphasizing the different parts responsive to the destinations with information independent of the receiving information;

sending all of the information by email to all the destinations with each destination receiving all of the information with at least one of the parts emphasized responsive to the destination; and

displaying the information with the one of the parts emphasized at least one of the destinations.

10. (new) The E-mail system according to claim 1, wherein the keyword information is stored in a tabular form.
